Asset Class Returns

The equity market ended marginally positive in January, up 0.1%, after a sell-off around month-end. The market was as much as 3.7% positive mid-month. Bonds continued to benefit from the positive sentiment post the ANC elective conference and rallied by 1.9% MoM. Property was down 9.9%, partly due to fears that certain companies may be the target of further damaging and very negative research. Cash returned 0.6% and the rand strengthened by 4.3%.

Drivers of returns:

The Resource sector started the year on the front foot and ended up 3.7% MoM. Industrials were largely unchanged, up 0.2%. Financials pared some of their December gains and ended January down 2.3%.

There were significant moves among Top-40 stocks: Capitec (-27%) and Fortress (-29%) sold off significantly. On the positive side, retailers Shoprite and Mr Price rallied 11% and 16%, respectively, whilst Anglo American gained 13%.

RISK PROFILE: MODERATE-HIGH

Low	Mod-Low	Mod	Mod-High	High
			Mod-High	

- This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be higher than a medium risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium to long term investment horizons.
