Asset class returns

The SA equity market ended June 2.8% higher, despite an escalating trade war between the US and China that is weighing on emerging market (EM) assets. However, other asset classes suffered as bonds and property declined by 1.2% and 3.5%, respectively. The decline in both these asset classes was likely influenced by a 8.1% depreciation in the rand. Cash yielded 0.5%.

RISK PROFILE: MODERATE-HIGH

Low	Mod-Low	Mod	Mod-High	High
			Mod-High	

- This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be higher than a medium risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium to long term investment horizons.
