RISK PROFILE: MODERATE-HIGH

- This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be higher than a medium risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium to long term investment horizons.

FUND MANAGER COMMENTARY AT 29 FEB 2024

After a positive start to 2024, global equity market performance accelerated in February (MSCI World +4.3% MoM). US corporates essentially wrapped up their feedback on 4Q23 earnings, which were 8% higher YoY in aggregate (and up 11.5% YoY when stripping out the energy companies). These results were well ahead of analyst expectations that earnings would barely grow YoY. Similar to 2023, which saw a concentrated group of companies (those most likely to benefit from AI) drive the majority of equity market performance, a small grouping disproportionately impacted February's stellar performance. Nvidia (+240% YoY in 2023) managed to deliver earnings and guidance that exceeded lofty expectations, and its share price was up 29% MoM, adding 1.1% to the S&P 500's performance for February. Meta (+26% MoM) and Amazon (+14% MoM) also delivered better-than-anticipated earnings and added another 1% to the S&P 500's performance between them. At the other end of the spectrum, Adobe, Apple, and Alphabet, among 2023's top AI performers, delivered earnings that failed to inspire and ended February lower (-9%, -2%, and -1% MoM, respectively). Emerging markets (EMs) had underperformed developed markets (DMs) for four consecutive months coming into February but managed to slightly best DMs in the month (MSCI EM +4.8% MoM). Chinese equities, which have been a major drag on EM performance, rallied strongly last month as stimulus measures in the world's second-largest economy helped reverse extremely negative sentiment towards the country's equities (Nasdaq Golden Dragon China Index +12.3% MoM, Shanghai Composite +8.1% MoM).
